

# Hampshire COVID-19 weekly summary

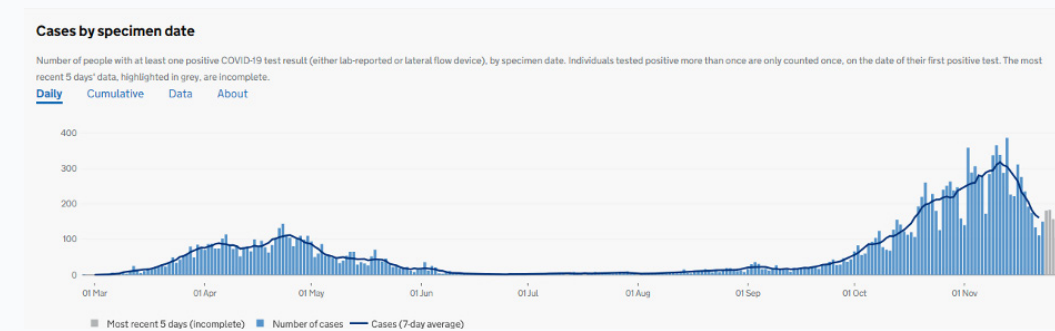

30 November 2020

The data published here is correct as of **30 November 2020** but it may be updated and amended as new data becomes available.

Current alert level in Hampshire:

National restrictions

## Lab-confirmed cases

Total cases since March 2020

**17,188**

Last week: **16,083**

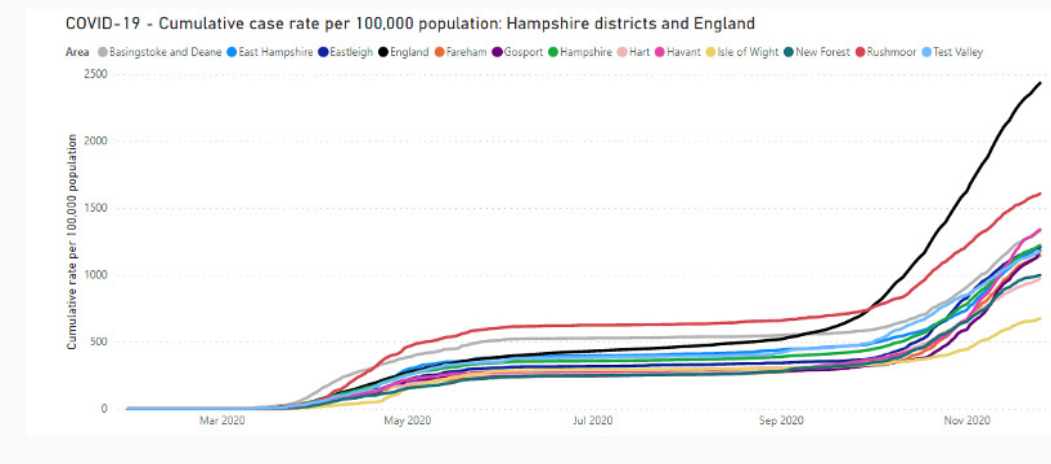

Cases in the last seven days

**1,105** ↓

Last week: **1,246**

The number of cases in the last seven days is preliminary and subject to change. This is because there is a lag in reporting of confirmed cases on the UK dashboard.

## Lab-confirmed cases (per 100k population)

Total case rate

**1,243.2**

Last week: **1,163.3**

Hampshire case rate in the last seven days

**85.2** ↓

Last week: **147.2**

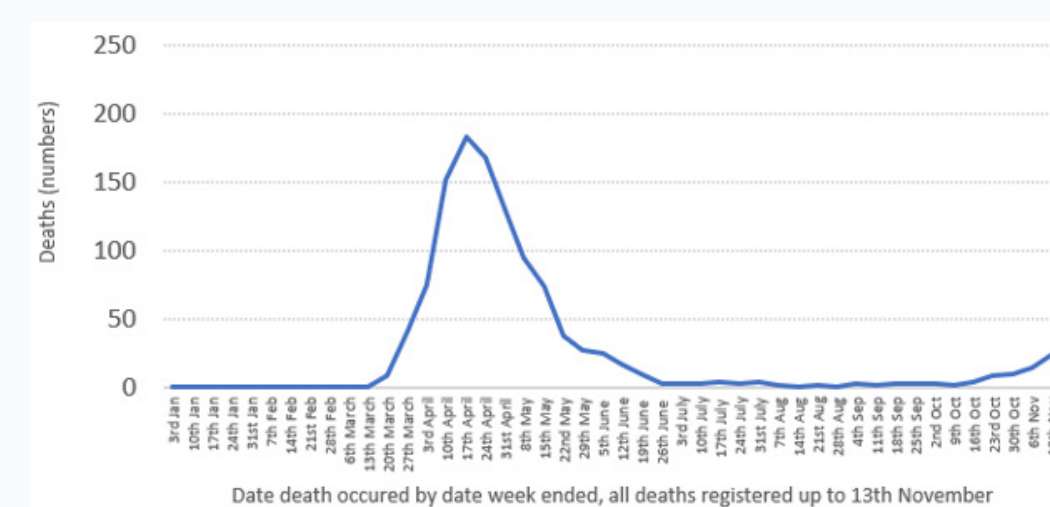

England case rate in the last seven days

**175.8** ↓

Last week: **251.5**

Most recent data in the graph above is from 25 November. This is because there is a lag in reporting of confirmed cases on the UK dashboard.

## COVID-19 associated deaths

Total deaths

**1,148**

Last week: **1,120**

Deaths in hospitals

**609** ↑

Last week: **587**

Deaths in the community, including care homes

**539** ↑

Last week: **533**

Deaths in the last seven days

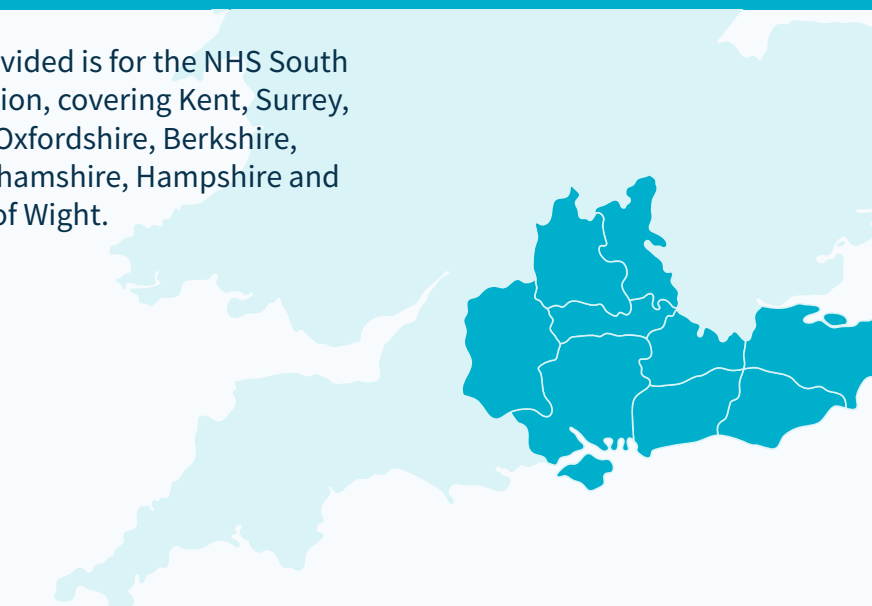

**24** ↑

Last week: **14**

Excess (extra) deaths are slightly below the number we would usually see at this time of year.
