

### Evaluation of Historical Documents

#### **Tithe maps and awards**

The Tithe Commutation Act 1836 completed a process that had been going on piecemeal for some years, and required the payment of tithe (i.e. local taxes payable (usually) to the church or its representative) to be converted from a percentage of the produce of land, to a money payment. In order to calculate and record the titheable value of land detailed maps were drawn up for each parish. These are valuable pictures of land use and ownership at the relevant time (usually between 1838 – 1845). The way in which roads and tracks are recorded on the map and in the award can be helpful in determining their status (public roads, were often untitheable, because they did not have a value for agriculture and might be recorded in the 'Public Roads and Waste' section of the award). These maps have a high evidential value, because they were part of a statutory process which was open to public scrutiny. However, they were not prepared with a view to recording the existence or status of public highways and, in the past, their significance for rights of way has been overstated. It is impossible to apply a general set of interpretative rules for all tithe maps: different maps treat public highways in different ways and each must be studied and evaluated individually if any reliable conclusion is to be drawn from them.

#### **Ordnance Survey Maps and records**

The first maps of Hampshire produced by the Ordnance Survey and commercially available date from the early C19th and were a great improvement on contemporary maps of a similar genre. The most valuable series of maps are the 1:2,500 County Series maps, produced at intervals between the late 1860s and the 1940s. These maps provide an accurate picture of the landscape at the date of survey, and carry strong evidential weight, but it should always be borne in mind that the surveyors mapped physical features and not legal rights. Rarely can these maps alone be taken as evidence of the legal status of the paths and tracks shown on them.

Additional help in determining the status of a path can be found in other Ordnance Survey Records: the first edition County Series Map is accompanied by a Book of Reference, which identifies 'Roads', and sometimes 'Public Roads' or 'Occupation Roads'; the object name books (some have survived for the third edition, circa 1909) use local knowledge to describe a features, including public roads; boundary books can record public highways where they also form parish boundaries and levelling records may also refer to roads and other features.
