

Ordnance Survey Maps and records

The first maps of Hampshire produced by the Ordnance Survey and commercially available date from the early C19th and were a great improvement on contemporary maps of a similar genre. The most valuable series of maps are the 1:2,500 County Series maps, produced at intervals between the late 1860s and the 1940s. These maps provide an accurate picture of the landscape at the date of survey, and carry strong evidential weight, but it should always be borne in mind that the surveyors mapped physical features and not legal rights. Rarely can these maps alone be taken as evidence of the legal status of the paths and tracks shown on them.

Additional help in determining the status of a path can be found in other Ordnance Survey Records: the first edition County Series Map is accompanied by a Book of Reference, which identifies 'Roads', and sometimes 'Public Roads' or 'Occupation Roads'; the object name books (some have survived for the third edition, circa 1909) use local knowledge to describe a features, including public roads; boundary books can record public highways where they also form parish boundaries and levelling records may also refer to roads and other features.
