Main Modification 4 comments	<p>Following January - February 2026 flooding I am reminded to use this as a demonstration of how resilient poor Alderholt, Fordingbridge and its surrounding area is. The residents, services and local businesses have all suffered due to all the roads from Alderholt being flooded for many days in a row, cutting us off and making hospital and doctor appointments difficult to attend. The road surface under the floods has, overnight, become damaged and severely potholed. If Cemex are given further permission to extract gravel into the water-table this flooding will increase and all the area around our village will remain permanently damaged. The surrounding houses will be at greater risk of water ingress and their building and contents insurance will sky rocket. This area will be a flood risk and all our insurances will increase, maybe some will become uninsurable. Our vehicle will become further damaged and if you add an extra 100 lorry manoeuvres a day on top of this flooding and road damage the area will become further destroyed. Hampshire council surely can not condone this predictable damage and failure of a locality and community.</p>
